SUMMARY

Experienced developer with a strong background in e-commerce projects and expertise in Django Selenium, Wordpress and Shopify. Proven ability to deliver robust web applications and automate testing processes. Adept at translating business requirements into technical solutions.

WORK EXPERIENCE

Digi Inn, Front-end WebDeveloper

July 2022 – Sep 2022

- As a frontend web developer, I gained valuable experience in crafting responsive and visually appealing web interfaces

Digi Inn, Jr.Python Developer

Dec 2023 – April 2024

- My primary responsibilities include developing web applications using Django framework and designing user interfaces. Additionally, I worked on automation of social media platforms using Selenium. I stay updated with the latest developments in Python, Django, and automation Testing technologies.

SKILLS

- AI, DataMining, DataScraping, WebScraping, JIRA, SoftwareTesting, QualityAssurance, Selenium Automation, Python, Django, Wordpress, Shopify

PROJECTS

Intelli Drive: Raspberry Pi, Arduino, Raspbian OS, Cascade Trainer, Open CV, Arduino IDE

- During my project, I successfully developed an autonomous car utilizing Raspberry Pi and Arduino platforms, equipped with advanced functionalities including lane following, traffic sign recognition, traffic signal detection, and object detection capabilities. This involved integrating hardware components such as sensors and actuators with software modules. Through effective collaboration with team members, I ensured seamless integration of both hardware and software components, achieving a fully operational autonomous vehicle prototype that demonstrated robust performance in varied scenarios.

Social Suite Python: Django, Selenium. HTML, CSS, Javascript

- I developed 'social suite,' a comprehensive web application enabling user role management (admin, manager, user). the project's core functionality involved scraping data from google maps, implementing a database, and leveraging django for backend development

DaigWala Business Management System

- Developed a comprehensive business management system using django for daigwala, encompassing user management, accounts management, and inventory management

Instagram Automation Upload Posts, Like and Follow

- Developed a comprehensive Instagram automation project using Django and Selenium, with features including automated post uploading, liking, and following functionalities. Designed and implemented a user-friendly dashboard featuring role-based access control, utilizing HTML and CSS for frontend development.

CastleAutoPart

- Created an e-commerce platform specializing in automotive parts sales.

www.castleautopart.com

TheTrendSale

- Created an e-commerce platform specializing in Home, kitchen and Pet Accessories

www.thetrendsale.com

EDUCATION

The University of Lahore

Sep2019 - Oct 2023

- BS In Computer Science
- CGPA: 3.51
