- Highly motivated and organized.
- Able to explain technical data to non technical colleagues.
- Have good technical and analytic skills.
- Ability to ensure projects run to schedule and budget.
- Experience of training and mentoring junior and new staff.

PROJECTS

Human Resource Management System

The function of the human resources department involved tracking employee histories, skills, abilities, salaries, and accomplishments. Replaced certain processes with various levels of HRMS to distribute information management responsibilities so that the bulk of information gathering is not delegated strictly to HR. By allowing employees to update personal information and perform other tasks, information is kept more accurate and HR professionals are not bogged down.

Each module performed a separate function within the HRMS that helps with information gathering or tracking. HRMS modules:

- a. Recruitment
- b. Gathering, storing, and accessing employee information
- c. Performance evaluation
- d. Benefits administration
- e. Employee self-service
- f. Blog and Suggestions
- g. News and Events

Tools Used:

- Language: C#
- Database: MySQL Server
- IDE: Microsoft Visual Studio

Student Information System

Student information systems provided capabilities for registering students in courses, documenting grading, transcripts, and managing many other student-related data needs in a school.

Tools Used:

- Language: C++

Airline Reservation System

Airline reservation system contained airline schedules, fare tariffs, passenger reservations and ticket records.

Tools Used:

- Language: Java
- IDE: Netbeans
